- cascode operational amplifier (共源共栅运算放大器), 345
  - folded (折叠式~), 355-361
  - telescopic (套筒式~), 351-352
- cascades (共源共栅)
  - folded (折叠的~), 90-92
  - low-voltage (低电压~), 144-146
  - poor man's (劣质的~), 88-89
- cascode stage (共源共栅级), 82-92
  - frequency response (~的频率响应), 196-198
  - input-output characteristic of (~的输入-输出特性), 84
  - model (~的模型), 197
  - Output impedance (~的输出阻抗), 85-86
  - poor mans cascode (穷人的~), 88-89
  - shielding property (~的屏蔽特性), 89-90
  - single-stage amplifiers (~单级放大器), 254
  - small-signal characteristics (~的小信号特性), 84
- Cauchy's Principle of Argument (柯西幅角原理), 447
- center frequency (中心频率), in voltage-controlled oscillators (压控振荡器的~), 632
- CG stage (共栅级). 参见 common-gate (CG) stage
- channel charge injection (沟道电荷注入), 550-552
  - cancellation (~的消除), 553-555
- channeling (沟道效应), 717
- channel-length modulation (沟道长度调制), 23-24
- charge injection (电荷注入)
  - channel (沟道电荷注入), 550-552, 553-555

charge modeling (电荷模型)

MOS device models (MOS 器件的~), 707-708

charge-pump phase-locked loops (电荷泵锁相环), 666-677

basic (基本的~), 671-677

charge pump (~中的电荷泵), 669-671

dynamics (~的动态特性), 672-677

Lock acquisition (锁定捕获), 666-677

phase/frequency detector (~的鉴相/鉴频器), 667-669

transfer function (~的传输函数), 672-677

charge pumps (电荷泵)

in charge-pump phase-locked loops (电荷泵锁相环中的~), 669-671

PFD/CP nonidealities (鉴相鉴频器/电荷泵的非理想性), 677-681

charge redistribution (电荷再分配)

in noninverting amplifier (同相放大器中的~), 563

chemical vapor deposition (CVD) (化学气相沉积), 718

circuit design (电路设计)

abstraction levels (~的抽象级别), 5-6

circuits (电路)

bandgap reference (带隙基准~), 509~535

bias (偏置~), 477

common-gate (共栅~), 278

differential (差动(分)~), 103, 579-581

feedback (反馈~), 275-282

half (半边~), 113-115

multi-pole (多极点~), 205-206

noise representation in (~中的噪声表示), 236-243

one-pole (单极点~), 204

open-loop (开环~), 278

precision multiply-by-two (精确乘 2~), 567-568

sampling (采样~), 543-547

switched-capacitor (开关电容~)

clamp transistors (箝位晶体管), 395-396

clock 时钟

feedthrough (~馈通), 552-553

closed-loop behavior (闭环特性)

of two-stage operational amplifiers (两级运算放大器的~), 493-495

closed-loop frequency response (闭环频率响应) 416-419

closed-loop gain (闭环增益), 276-277

closed-loop small-signal performance (闭环小信号性能)

- high-speed amplifiers (高速放大器), 501-502
- closed-loop transfer function (闭环传输(递)函数), 275
- CMFB. 见 common-mode feedback (CMFB)
- CMOS (complementary MOS) devices (互补 MOS 器件), 5
  - processing technology (～的工艺技术), 712-731
- CMOS inverters (CMOS 反相器), 693
  - ring oscillators using (采用～的环形振荡器), 614
- CMOS oscillators, 参见 oscillators
- CMOS technology (CMOS 技术)

- current sources (电流源)

applications of (～的应用), 134  
cascade (共源共栅～), 140-146  
NMOS device used by source follower as (源跟随器采用的 NMOS 为～), 69  
current-voltage feedback (电流电压反馈), 291-294  
loading in (～中的加载), 308-310  
curvature correction (曲率校正), 522  
CVD. 参见 chemical vapor deposition (CVD)  
Czochralski method (切克劳斯基晶体生长法), 713

## D

dangling bonds (悬挂键), 234  
data (数据)  
binary (二进制～), 2-3  
dead zone in phase-locked loops (锁相环的死区), 678-679  
deep-submicron effects (深亚微米效应), 460-463  
degeneration (负反馈)  
resistive (电阻～), 585-591  
delay-locked loops (DLLs) (延迟锁相环), 683-685  
delay variation (延时变化)  
by interpolation (通过插值的～), 638-640  
by positive feedback (通过正反馈的～), 636-638  
deposition (淀积), 718  
designing operational amplifiers (运放的设计), 353-354  
design rules (设计规则), 734-736  
device models (器件模型)  
choice of (～的选择), 92-93  
Devices 器件, 参见 active devices  
MOS devices  
NMOS (n-type MOS) devices (NMOS～)  
passive devices (无源器件)  
PMOS (p-type MOS) devices (PMOS～)  
differential amplifiers (差动(分)放大器), 100-128  
biased by current mirrors (电流镜偏置的～), 137-138  
common-mode response (～的共模响应), 118-123  
Gilbert cell (吉尔伯特单元), 126-128  
differential circuits (差动(分)电路), 103  
nonlinearity of (～的非线性), 579-581  
differential compensation (差动(分)补偿), 485-487  
differential conversion (差模转换), 120-123

differential pairs (差动(分)对)

basic (基本的~), 103-117

biasing (~的偏置), 166

cascode (共源共栅~), 126

common-mode behavior of (~的共模特性), 106

with current-source load (电流源为负载的~), 147

degenerated (负反馈的~), 116-117

distortion in (~中的失真), 577

frequency response (~的频率响应), 198-203

high-gain (高增益~), 375

input-output characteristic (~的输入输出特性), 104

large-signal behavior (~的大信号特性), 106-109

layout (~的版图), 739-741

lemma (~的辅助定理), 113-114

with MOS loads (MOS 为负载的~), 123-126

noise in (~中的噪声), 256-262

with offset (有失调的~), 593-597

output voltage (~的输出电压), 106

with passive load (带无源负载的~), 146-148

PMOS (PMOS~), 604

qualitative analysis (~的定性分析), 104-106

quantitative analysis (~的定量分析), 106-117

small-signal behavior (~的小信号分析), 110-113

used in tuning ring oscillators (调节环形振荡器中采用的~), 633-641

differential realization (差动(分)实现)

in noninverting amplifier (同相放大器的~), 564

differential sampling circuits (差动(分)采样电路), 554-555

differential signals (差动(分)信号)

response of differential pairs to (差动(分)对对于~的响应), 198-203

single-ended signals vs. (单端信号与~), 100-102

diode-connected device (二极管连接型器件), 136

diode-connected load (二极管连接型器件为负载)

CS stage with (带~的共源级), 52-58

diodes (二极管)

layout in passive devices (无源器件的版图), 753

DIP. 参见 dual-in-line package (DIP)

discrete-time (离散时间)

integrators (~积分器), 569

resistors (~的电阻), 569

dissipation (消耗)

power (功率~), 632

distortion (失真)

in common-source stage (共源级中的~), 577

in differential pair (差动(分)对中的~), 577

even-order (偶次~), 597-598

distribution (分布)

amplitude (幅值~), 224-225

reference (参考源的~), 744-746

double-null method (双零方法), 338-339

drain (漏极), 7, 8

drain current (漏电流), 12-15, 148-149

combining (~的结合), 149

of common-source device (共源器件的~), 63

saturation of (~的饱和), 17

drain-source voltage (漏源电压)

output impedance variation with (由~引起的输出阻抗的变化), 700-701

dual-in-line package (DIP) (双列直插式封装), 764

dummy switches (虚拟开关), 553-554

dummy transistors (虚拟晶体管), 740

## E

EET. 见 extra element theorem (EET)

electromigration (电迁移), 729

enclosure (覆盖), 734-735

etching (刻蚀), 718

even-order distortion (偶次失真), 597-598

exclusive OR (XOR) gate (异或门), 652

extension (延伸), 735-736

extra element theorem (EET) (额外的元定理), 206-208

## F

fabrication (制造)

active devices (有源器件~), 718-721

CMOS devices (CMOS 器件~), 718-730

interconnects (互连的~), 727-730

passive devices (无源器件~), 721-727

transistor (晶体管~), 718-720

feedback (反馈), 274-339. 参见 feedback circuits

- analysis (～分析)
- difficulties associated with (与～相关的困难), 299-303

## G

- gain (增益)
  - asymptotic form (渐进～形式), 336-337
  - boosting (～的提高), 364-373
  - closed-loop (闭环～), 276-277

common-mode (共模~), 156-159  
crossover frequency (~交叉频率), 411, 417  
desensitization (~的灵敏度降低), 275-278  
open-loop (开环~), 303, 306-308, 345-346  
small-signal (小信号~), 146-152  
stage, added to common-source stage (添加到共源级的~级), 237  
voltage (电压~), 152-155  
gain-bandwidth trade-offs (增益带宽的折中), 203-206  
gate (栅极), 7  
  cascode voltage (共源共栅中的~电压), 355  
  exclusive OR (异或门), 652  
  resistance (~电阻), 232  
  shadowing (~阴影), 740  
  voltage (~电压), 145  
Gilbert cell (吉尔伯特单元), 126-128  
gradient (梯度), 741

## H

half circuit (半边电路), 113-115  
  differential pair (差动(分)对的~), 126  
  folded cascode operational amplifiers (折叠共源共栅运放的~), 357  
half-circuit concept (半边电路的概念), 152  
high frequencies (高频)  
  common-gate stage at (~条件下的共栅级), 194  
high-frequency model 高频模型  
  cascode stage (共源共栅级的~), 196  
  common-source stage (共源级的~), 181  
high-slew-rate operational amplifiers (高转换速率(高压摆率)运放), 397-400  
high-speed amplifiers (高速放大器), 495-507  
  closed-loop small-signal performance (~中闭环小信号性能), 501-502  
  design (~的设计), 500-501  
  general considerations (~的概述), 496-500  
  large-signal behavior (~中的大信号特性), 505-507  
  precision issues in (~的精度问题), 496-498  
  scaling (~中的缩放), 502-505  
  speed issues in (~的速度问题), 498-500  
hot carrier effects (热载流子效应), 700  
hybrid models (混合模型), 303-304

## I

## impedance (阻抗)

Blackmans theorem (布莱克曼~定理), 325-330, 338-339

floating (浮动~), 174

input (输入~), 187, 189, 290-291, 296-297

modification (~的变化), 278-279

output (输出~), 181, 287-288, 292-293, 296-297, 369, 518-521, 525-529, 700-701

source (源~), 241

## inductance (电感)

mutual (互感), 770-771

self (自感), 766-770

## inductors (电感器)

monolithic (单片~), 618

## injection (注入)

channel charge (沟道电荷~), 550-552

## input impedance (输入阻抗)

common-gate stage (共栅级的~), 77, 79-82

in common-source stage (共源级的~), 187

source follower (源跟随器的~), 73, 189

and voltage-current feedback (~与电压电流反馈), 296-297

voltage-voltage feedback (电压电压反馈的~), 290-291

## input nodes (输入结点), 参见 nodes, output nodes (输出结点)

in cascode stage (共源共栅级的输入、输出结点), 196-198

in common-gate stage (共栅级的~), 193-196

in common-source stage (共源级的~), 181-187

and differential pairs (差动(分)对的~), 198-203

and source followers (源跟随器的~), 188-93

## input-output characteristic (输入输出特性), 46, 48

cascode stage (共源共栅级的~), 84

common-gate stage (共栅级的~), 76

common-mode (共模的~), 105

common-source stage with diode-connected load (带二极管连接型负载的共源级的~), 54, 55

differential pairs (差动(分)对的~), 104

large-signal (大信号~), 151-52

of nonlinear amplifier (非线性放大器的~), 281

of nonlinear system (非线性系统的~), 576

of sampling circuits (采样电路的~), 551

- source follower (源跟随器的~), 68
- input-output transfer function (输入输出传输(递)函数), 178
- input poles (输入极点), 参见 output poles. poles (极点)
  - in cascode stage (共源共栅级中的~), 196-198
  - in common-gate stage (共栅级中的~), 193-196, 181-187
  - differential pairs (差动(分)对中的~), 198-203
  - source followers (源跟随器的~), 188-193
- input range limitations (输入范围限制), 388-390
- input-referred noise (输入参考噪声), 237-242
  - of differential pair (差动(分)的~), 256-262
- input-referred thermal noise (输入参考热噪声)
